

SOE AIR

LEMON WELL MED
Zest for Wellness

Activating oxygen
in the air and
stimulating
detoxification

What is Singlet Oxygen Energy?

In plants, chlorophyll acts as the catalyst during photosynthesis, and it uses a specific wavelength that transfers the light into energy while producing singlet oxygen.

Singlet oxygen is synthesised by photochemical, thermal, chemical, or enzymatic activation of O₂. Singlet oxygen is a powerful oxidant that oxidises cellular components such as lipids, proteins, and nucleic acids. It is long-lived in the cells and can diffuse over sizeable distances, including across cellular membranes into extracellular parts.

Singlet Oxygen Energy (SOE) is a bio-usable form of oxygen stimulating tissue oxygenation; it is a form of energy that the human body produces, recognises, and can use immediately.

How does SOE Air work?

The air is drawn through the filter across the catalyst and the oxygen changes from its basic triplet state into singlet condition multiple times. In the last step, it changes from its singlet into its basic condition. During this process, singlet oxygen-enriched air is released and transmitted to the water molecules in the air. The user inhales this air.

Oxygen is critical to life and essential for Adenosine Tri-Phosphate (ATP) production, a key molecule in energy metabolism. The body cannot sustain cellular processes without ATP.

It is important to note that the SOE Air device should not be confused with an air purifier that filters the air. Instead, this device adds energy to the oxygen, which the body can utilise.

Benefits

- It is a non-invasive, natural, small, and portable device. A great company while travelling as no mask or cannula is involved.
- Improves energy levels by providing increased support to the respiratory and cardiovascular systems.
- Reduced stress levels as the user experiences a more restorative sleep.
- Better skin health as the device supports the body's detoxification process.
- Powerful reduction of reactive oxygen species that contribute to many chronic diseases.

Who can use this device?

Anyone can use the device; however, people with breathing, sleeping, and low energy concerns benefit the most. It is an excellent addition to your wellness, beauty, or medical practice while your patients enjoy their treatments. Perfect also for home and office use.

Are you looking to provide other services to your patients as well?
